# <complex-block>

# Reduce the risk of accidents.

Install a drive speed limiter.

## Maintain a safe speed.

By installing a drive speed limiter you can make sure that your drivers are always travelling at a safe speed. The drive speed limiter allows you to set a maximum speed that your equipment can be operated at, at any time. Giving you complete peace of mind that it is being driven responsibly at all times.

## It's easy to upgrade.

The drive speed limiter is easy to install, as it simply requires an upgrade to your machine's software. This software upgrade integrates automatically with your current software and limits the operational speed of your machine at your desired level.

# Less damage, less wear and tear.

Driving your machine at a safe and steady pace will result in less damage to the machine. It will also help extend the life of your tyres and decrease the wear and tear on the machine itself. You'll save money not only on service and maintenance costs, as your tyres last longer, but also on fuel consumption.

## Less accidents, greater safety.

Limiting the speed that your driver can operate the machine, limits both the number of accidents and their severity. Slower speeds usually means less damage and often accidents can be avoided entirely, as personnel and other machines have more time to move to a safe space. Safe speeds mean a safer work environment.

Upgrade your reachstacker, forklift or empty container handler today.

## Cut carbon, cut costs.

Once installed, the Kalmar drive speed limiter will help drive down costs, as working at a steady pace means less fuel is being used. Less fuel, means less carbon; saving you money and helping to build your environmental credentials.

## Upgrade today.

No matter how you look at it, if you want to extend the life of your machines, increase safety, reduce fuel bills and your carbon footprint, then upgrade to a Kalmar drive speed limiter today.
