Productivity

- Preventive Maintenance Package contains all the parts and maintenance needed for 500, 1000 and 2000-hour maintenance of your fleet.
- Central Greasing System ensures that your equipment's key components are always fully lubricated, no matter how difficult they are to access.
- Kalmar Load Counter displays the number of lifts performed with your machine on the in-cabin monitor, differentiating between top and bottom lifts and measuring them separately across a set period of time.
- Kalmar Insight Retrofit opens up the complete functionality of Kalmar Insight for equipment of any brand, giving you a real-time view of productivity and performance.

Compliance

- Verified Gross Mass (VGM) Solution helps meet SOLAS requirements by enabling equipment to automatically measure the precise weight of a container.

Safety

- Blue Safety Light automatically projects a blue spot on the ground when reversing.
- Driver Identification Solution prevents unauthorised equipment operation by requiring drivers to enter a PIN-code.
- Fire Extinguisher System automatically detects vehicle fires and extinguishes them in seconds.
- Reverse Warning System gives your drivers greater control while reversing, increasing safety and minimising the risk of accidents or damage.

Eco-efficiency

- Tyre Pressure Monitor System continuously monitors tyre pressure and shows the information on an in-cabin display.
- Drive Speed Limiter System restricts the speed at which equipment can be operated, reducing fuel consumption.
- Automatic Engine Stop System reduces wear and tear on your engine through automatic shut downs.

Lifecycle services that cut the total cost of ownership and drive efficiencies.

Plan

- **Start-up Services** help you get things up and running as quickly as possible to ensure a fast return on your investment, with expert planning support to make sure everything runs smoothly from day one.
- **Crane Consultancy** can improve the performance and availability of your crane equipment while extending its lifetime – whatever the brand.
- **Crane Inspection** services provide expert analysis for all situations, whether you want to extend the lifetime of a crane, assess damaged or underperforming equipment, or find a way to cut inspection costs and times.

Support

- **On-call Support** is ideal when you need short-term support to get your equipment back up and running again.
- **Repair and Refurbishment** services help extend the lifetime of your fleet and save you money – while improving overall performance levels.
- **Kalmar Care** flexible maintenance contracts help support your day-to-day operations, securing maximum availability and uptime for your equipment fleet and operating systems.
- **Kalmar Genuine Parts** are designed and manufactured to the highest standards, so you get the right part for the job every time.
- **Kalmar Parts Care** provides end-to-end visibility over your spare parts process with a plan that will both improve parts availability and free up working capital.

Optimise

- **Kalmar Insight** performance optimisation and management tool turns your data into actionable insights, helping you to make smarter decisions with real-time productivity and performance data.

Online

- **Kalmar MyParts** offers over 50,000 Kalmar Genuine Parts for purchase 24/7, either by serial number or using our online machine parts catalogues. The service also maintains a list of your equipment and a complete order history.
